SWITCH DISCONNECTORS & CAM SWITCHES

LOAD-BREAK SWITCHES & CAM SWITCHES – GENERAL INFORMATIONS

MAIN-, LOAD-BREAK-, CAM- SWITCHES

MAIN SWITCHES AND MAIN SWITCHES WITH EMERGENCY STOP

In accordance with the standards IEC/EN 60204/ VDE0113, all production machines and machine tool must be equipped with a main switch, which disconnects all electrical equipment from all active mains connections during cleaning, maintenance and repair work and during longer downtimes.

Where 2 or more main switches are required, suitable protective interlocking devices must be used. However, we recommend the use of a 4 pole main switch (cam switch).

The main switch must be of one of the following types:

- a) Load-break switch which meets IEC/EN 60947-3 and VDE 0660 part 107 for application categories AC23-B or DC-23B.
- b) Disconnecter with auxillary contact (e.g. A3-10 switching program), which ensures at all times that the switch devices can break the load before the main contacts of the disconnecter are opened.
- c) The breaking capacity must be break at the same time the current of the largest motor at stall, together with the sum of the currents of all other motors and/or load circuits.

LT LOAD-BREAK SWITCH.. 20 – 160 A

Load-break switches can be used anywhere where compact ON-OFF switches with large contact gaps (isolators) and a high contact pressure, and where a greater short circuit protection is required. They are thus used as main switches in accordance with IEC/EN 60204/ VDE 0113 incl. locking device, terminal cover and forced-switching contactors.

Disconnectors according to IEC/EN 60947-3 & VDE 0660 part 107 with switching-position-indicators for 690 V.

3-pole or 4-pole motor switch. In accordance with IEC/EN 60947-3 / VDE 0660 part 107, these LT range switches have a high AC3 & AC23A switching capacity.

CAM SWITCHES, 10 – 250 A

Cam switches can be used for practically any purpose, as motor switches, main switches, control switches or instrument switches for example. Alongside the list of switching programs, a practically endless list of special switching programmes can also be used.

SCHRACK cam switches are modular, operate with double disconnection per pole and two contacts per switch cell. Using a variety of models, additional devices and various handles and front frames, they can be used in almost endless combinations. The switches of all types are made up of a locating mechanism and a switch kit. The cams are driven by a stabile, torsionally rigid aluminium shaft. The locating mechanism determines the switching angle and the number of positions. Switches of all sizes and designs can in theory also be designed with 90°, 60°, 45°- and 30° switching angles.

SCHRACK-INFO

Their ideal performance characteristics enable main switches to be used as main switches, emergency stop-, repair- & safety switches.
