1 General Information

Symbols used:

www.elotech.de	Messages shown by the controller are written in this font.				
MRS / MRE	Measuring Range Start / Measuring Range End				
<default></default>	Symbolizes the factory adjustment of the respective parameters.				

2 Installation Instructions

Make sure the device is used for the intended purpose only.

The devices of type R4100-C are designed for installation in control panels, the I/O-Boards of type R4100-M are designed to be mounted on cap rails.

Protect the device against impermissible humidity and contamination.

The permitted ambient temperature range may not be exceeded.

Electrical connections must be made according to valid regulations and by properly qualified personnel.

If using thermocouple sensors, compensation lines have to be connected directly to the controller terminals. Sensors may be connected only in compliance with the programmed range.

Sensor cables and signal lines (e.g. logic or linear voltage outputs) must be placed separately from control lines and mains voltage supply cables (power cables).

In order to maintain EMC compliance screened detectors - and signal lines have to be used.

It is not permitted to connect the grounds of the sensor-inputs and logic-outputs with each other.

Spatial separation of R4100 devices and inductive loads is recommended. Interference from contactor coils must be suppressed by connecting adapted RC-combinations parallel to the coils. Control circuits (e.g. for contactors) should not be connected to the mains power supply terminals of the R4100 devices.

The configuration parameters (Window: System) are generally to be selected first.

Disclaimer of Liability

The contents of this document is checked for the conformity with the hardware and software described. Nevertheless, we are unable to preclude the possibility of deviations so that we are unable to assume warranty for full compliance. However, the information given in the publication is reviewed regularly. Necessary amendments are incorporated in the following editions.

We would be pleased to receive any improvement proposals which you may have.

The information contained herein is subject to change without notice.

Disposal

Electronic scrap and components are subject to special treatment and must be disposed of by authorised companies.

4.2.1 Connection Diagram Fieldbus Modules

Serial Interface

L1 L2 L3 L4 L5 L6 L7									
							Bus	Туре	Remark
	А	В					RS485	03	Parameter HW-config = RS232 / RS485
			RxD	TxD	GND		RS232	03	Parameter HW-config = RS232 / RS485
					-	+	TTY	03	Parameter HW-config = TTY (current loop)

The serial fieldbus module contains the three interfaces RS232, RS485 und TTY. By choosing **the connection and setting the parameter "HW-config" the** requested bus is selected.

<u>Typ 09: Profibus</u>

Pin 3	Daten RxD / TxD - P
Pin 5	GND
Pin 6	+5V
Pin 8	Daten RxD / TxD - N

The 5V-Supply is designed for the supply of the termination resistors. Further loads are not allowed.

4.2.2 Connection Diagram: LAN and USB

USB:

- Save process data, configuration data and alarm data on an USB-Stick.
- Write back configuration data from USB-Stick to the controller.
- Make a Firmwareupdate. (Please use FAT formatted USB flash drives.)

LAN:

- Connection to configuration tool Elovision 3.
- Read and write parameters by MODBUS-TCP protocol
- Webinterface for easy configuration

5 Operating the device

5.1 General advises regarding GUI

The device R4100-C provides a high-contrast color screen with touch functionality.

After switching on the devices R4100-C and R4100-M and after completion of the initialization, the actual temperature value and the setpoint are displayed.

The device R4100-C is operated by menus. The different parameters are displayed mainly in plain text and can be displayed in Englisch and German language.

In the following the general methods of data and commands entry are explained:

◆ 1 EDIT Setpoint 1	1 7 7	The header displays on the left the current adjust- able parameter (this example: setpoint 1)
45	1 Z 3 4 5 6	By pressing the number keys the value of the pa- rameters can be entered.
°C 70 0 400	7 8 9	By pressing the "SAVE" – key the entered value will be set.
SAVE	⊠ 0 7.	
°C 250 0 800	The value, entered I the blue frame. Underneath, on the played on the right The allowed range is	by pressing the number keys, is displayed within left the unit is shown and the previous value is dis- (250). s displayed at the bottom (0800).

5.2.3 Menue "Functions"

Version: 1.00

Filling	Function "manual / automatic filling":
manuality	If the button "Filling" is toggled to "automatic": The fill- ing valve will be activated if the filling level drops below maximum level.
	If the fluid level is on maximum level (both contacts closed) the pump will be released. If the fluid level is inbetween maximum and minimum level the pump remains released.
	If the fluid level drops below minimal level (tank empty) the pump will be locked.
	When filling (tank is empty) was activated the pump will not be released until the fluid level exceeds maximum level.
	If the filling procedure lasts longer than "maximal filling time" (see menue 5.2.10.6) the the alarm output is activated.
Selection	Selection of setpoint 1 / setpoint 2:
Setpoint 1	Dependent on the currrent selection the controlled temperature follows setpoint 1 or setpoint 2.
	If setpoint 2 is selected the operating mode display shows "SP2" at the headline.

5.2.3.1 Autotune

Autotune off	Switches off autotune < Default >				
Autotune on off	Activates autotune				
The tuning algorithm determines the characteristic values within the controlled process and calculates the valid feedback parameters (P, D, I) and the cycle time. (= $0.3 \times D$) of a PD/I- controller for a wide section of the range.					
The autotune mode works during start-up shortly before the setpoint is reached. If acti- vated after the setpoint has already been reached, the temperature will first drop by ap- prox. 5% of the measuring range.					
The tuning algorithm can be activated at any time by selecting the parameter Autotune = "on" . After having calculated the feedback parameters, the controller will lead the process value to the actual setpoint.					
Selecting Autotune = "off" will stop the autotune function.					
Autotune duration > 2 hours: autotune stops with an error message.					

Manual R4100 _EN

Version: 1.00

5.2.10 Menue "Parameters"

5.2.10.1 Tool (equipment) selection

Tool selection	It is possible to store and to select 8 different sets of particular controlling parameters. Affected are the parameters being part of the submenues "Heating", "Cooling" and "Configuration Heating / Cooling".
	If tool no.4 is selected, e.g., the parameter set no.4 is applied to the temperature controlling. This parameter set is then also accessible for adjusting.
	If tool no. 2 – no. 8 is selected in the headline of the Operating Mode Display the no. of the current tool parameter set is indi- cated: "W.4", e.g.
	If the standard parameter set (no. 1) is selected there is no tool identification displayed.

5.2.10.2 Configuration Heating / Cooling

Conf. Heating-Cooling	Heating	Two-point controller: "Heating"
Heating-Cooling	<default></default>	
	Cooling	Two-point controller: "Cooling"
	Non-lin.	Two-point controller: "Cooling", with non-linear
	Cooling	characteristic curve for evaporation cooling
	Heating-	Three-point controller: "Heating-Off-Cooling"
	Cooling	

Manual R4100 EN

Version: 1.00

©Elotech GmbH

5.2.10.3 Control Parameters

By default the controller operates in PD/I control mode, i.e. controlling without deviation and with nearly no overshoot during start-up.

The controlling behaviour can be changed by adjusting the PID parameters listed in paragraphs 5.2.10.3.1 and 5.2.10.3.2:

no feed back	Setting $P = off$ (then D and I are switched off as well)
P-controller	Setting D and I = off
PD-controller	Setting I = off
PI-controller	Setting $D = off$
PD/I-controller	Modified PID-mode (set: P,D,I)

5.2.10.3.1 Heating Control Parameters

Heating Control parameter		This menue is only available if configurations Heating oder Heating-Cooling is selected. Depending on the configuration, parti-cular parameters are not visible.
P (xp)	OFF, 0.1400.0K <default=10,0></default=10,0>	Proportional range Unit: Kelvin
	1	
D (tv)	OFF, 1 200s <default=30s></default=30s>	Derivative time
	1	
I (tn)	OFF, 1 1000s <default=150></default=150>	Reset time
Cycle-time	0.5 240.0s <default=10,0s></default=10,0s>	The switching frequency of the actuator can be deter- mined through the cycle time. In this time interval the controller switches on and off once. <u>Voltage outputs for solid state relays (SSR):</u> Cycle time: 0,510 s Preferred settings for rapid control processes: 0,8s <u>Relay outputs:</u> Cycle time: > 10 s The cycle time should be adjusted to a time as long as possible in order to minimize wear of the relay contacts.
Max Out-	0 100%	
put ratio	<default=100%></default=100%>	The limitation of the output ratio is only necessary, if the heating energy supply is grossly overdimensioned compared to the power required. Normally it should be switched off (Setting: 100 %). The limitation becomes effective when the controller 's calculated output ratio is greater than the maximum permissible (limited) ratio. Warning! The output ratio limiting does not work dur- ing autotune.
Hysteresis	Only adjustable if "(xp)	" = off (on-off action, without feedback)
	OFF, 0.1 80.0 < Default=0.1>	For measuring range without decimal point

Manual R4100 _EN

Version: 1.00

OFF, 0.01 8.00 < Default = 0.01 >	For measuring range with decimal point
	Hysteresis: 10.0 -5.0 +5.0 setpoint process value

5.2.10.3.2 Cooling Control Parameters

Cooling Control parameter		This menue is only available if configurations Cooling oder Heating-Cooling is selected. Depending on the configuration, particular parameters are not visible.
P (xp) D (tv) I (tn) Cycle-time Max. Output ratio Hysteresis	see 5.2.10.3.1	
Deadband	Switching point distance "heating" and "cooling" This parameter is available for "heating and cooling" operations only. (Configuration Heating-Cooling = Heating-Cooling)	
	OFF, 0.1 80.0 <default=0.1></default=0.1>	For measuring range without decimal point
	OFF, 0.01 8.00 < Default=0.01>	For measuring range with decimal point

5.2.10.4 Ramps

Manual R4100 _EN

Version: 1.00

©Elotech GmbH

Ramp rising	OFF <default>, 0.1 99,9</default>	°K/min for measurement range without decimal point
	OFF <default>, 0.01 9.99</default>	°K/min for measurement range with decimal point
Ramp falling	OFF <default>, 0.1 99,9</default>	°K/min for measurement range without decimal point
	OFF <default>, 0.01 9.99</default>	°K/min for measurement range with decimal point

5.2.10.5 Cool down temperature

Cool down temperature	Function "cooling and off" described in 5.2.3 will be shut off
50°C	when this temperature is attained.

5.2.10.6 Maximal filling time

5	
Maximal Filling time	If the filling process lasts longer than the maximal filling
120s	time the alarm signal (monitoring signal) is activated.

5.2.10.7 Drainage time

Drainage time	This time is applied to the function "Drainage" described in
20s	5.2.3.

5.2.10.8 Offsets and setpoint limits

	By means of this menue the following parameters are ad- justable:	
Offsets and setpoint limits	 minimal setpoint supported by menue maximal setpoint supported by menue offset to be added to supply (forward circulation) temperature reading offset to be added to return (return circulation) temperature reading offset to be added to externally measured temperature reading

	19.2 kBaud < Default >	19.200 Bit/s		
	38.4 kBaud	38.400 Bit/s		
Baudrate	Display only	45,5 kBaud – 12Mbaud (forced by the master)		
		Not detected - no master connected		
Address	1 255	1 <default> 255 (ELOTECH-Standard)</default>		
		1 <default> 247 (Modbus-RTU-Protocol)</default>		
		1 <default> 32 (Arburg-Protocols)</default>		
		2 <default> 125 (Profibus)</default>		
		At this address a master communicates with the con-		
		troller. Each controller needs a unique address.		
Format	7 E 1 < Default >	7 Data bits, 1 Stop bit, Parity Even		
	701	7 Data bits, 1 Stop bit, Parity Odd		
	7 E 2	7 Data bits, 2 Stop bits, Parity Even		
	702	7 Data bits, 2 Stop bits, Parity Odd		
	7 N 2	7 Data bits, 2 Stop bits, Parity None		
	8 E 1	8 Data bits, 1 Stop bit, Parity Even		
	801	8 Data bits, 1 Stop bit, Parity Odd		
SEDIALS	8 N 1	8 Data bits, 1 Stop bit, Parity None		
< SLRIAL>	8 N 2	8 Data bits, 2 Stop bits, Parity None		
HW-config	The serial fieldbus mod	dule has three integrated interfaces.		
	Select here the desired	interface:		
CEDIAL	RS232/RS485	Signals see connection diagram.		
<serial></serial>	TTY	Signals see connection diagram.		
Remote	On	Profibus can read and write.		
<profibus></profibus>		Local operation is locked.		
	Off < Default>	Profibus can read only. Local operation is permitted.		

Menue	e"USB″		Save controller data on an USB-Stick. (USB-flash
Field b	us – USB – LAN/US	B 518	drive)
	save to USB	USB status	
Ę.	>	Key detected	The data is stored as a text file in an adjustable
	Load	Separator	
	>	none	The USB-flash-drive must be formatted with FAT.
Sample interval			(FAT16/ FAT32) The file name contains the
OFF			last 5 digits "xxxxx" of the MAC-ID.
Save to	USB All pa	arameters	Save all parameters
			Generates the file -> LogParaxxxxx.txt and
			LogPara.bin

Manual R4100 _EN

Version: 1.00

	Al. Logbook	Save the entries of the Alarm Logbook.		
	Granh	Generates the me -> LogBookxxxxx.txt		
Graph		Concretes the file > LogCrephywyyy tyt		
		Generates the me -> Logoraphixxxx.txt		
USB status		Display of the USB-status: no stick detected.		
	Kev detected	USB-stick detected		
	,,	Files can be saved or loaded from the USB flash		
		drive.		
Load	Load all	Loading a previously saved parameter set. The		
	Parameters	file "LogPara.bin" must exist on the USB flash		
		drive.		
Separator	Default	Delimiter symbol between single data sets:		
	none < Default >	Spaces		
	comma	1		
	semicolon			
	colon			
	tabulator	<tab></tab>		
	I	1		
Sample-	OFF; < Default >	Cycle time for writing an output line with time		
Interval	5720s	stamp on the USB stick. The values setpoint, ac-		
		tual value, output ratio and current actual value		
		are written out.		
If the parameter '	"Log interval" is set to	a numerical value, so a file named		
"LogR4000_xxxxx_YYYY_MM_DD.txt" is generated on the USB stick. "xxxxx" the last 5 dig-				
its of the MAC-ID. YYYY, MM and DD mean the year, month, day. After a change of date a				
new file is created.				
With the included names MAC-ID "xxxxx", the files can be assigned to different R4000 con-				
Each Log interval time a new row is added. The line includes a time-stamp, setpoint, the				
actual value, the output ratio and the actual current value.

	1		
MAC ID	549A11:5xxxxx	Display of the MAC-ID: 54:9A:11:5x:xx:xx	
LAN connection	online / offline	For connection to other devices this parameter	
		must be set to "online"	

5.2.11.3 About

Menue "About"			
System/About	S15		
Firmware	Firmware update		
28.17			
Language versio	on Factory setting		
1.02			
Type R4100-	www.elotech.de		
00-0-000-03-	5 info@elotech.de		
Firmware	Displays the current	firmware version	
Language version	Displays the current	language version	
Firmware update	Start the firmware update by selecting the button "Start Update" and confirm with SAVE. A confirmation prompt opens. If this win- dow is confirmed with YES, the unit turns into the loader mode.		
	When the loader mode is accidentally turned on, you can switch back by a mains reset into the existing user program.		

Version: 1.00

	If an update should be performed, a USB flash drive must be plugged in with the new firmware. After a short time the firmware folder appears in the line "Folder". E.g. "EL4100.01_V20xx_xx.ELO".
	Now you can start the loading process by touching the touch screen. The controller must not be disconnected from the power supply until the download is complete! After finished loading the new user program is started by a power interruption.
Factory setting	Reset to factory delivery status. With the help of this parameter, all settings are deleted and reset to the delivery status. Choose "Reset", then press "SAVE".
Type R4100- 0x-x-000-0x-5	Type key of the controller
Firmware	Currently installed firmware version

6 Error Messages

Error message	Cause	Possible remedy
At actual process value maximum value flashes	Top range end has been exceeded, sen- sor defect	Check sensor and cable
At actual process value minimum value flashes	Bottom range end has been exceeded, sensor defect	Check sensor cable Check process value offset TC connected with inverted polarity
REMOTE: Parameter locked	Adjusting of parame- ters is not allowed. Device is controlled by fieldbus	Profibus: The parameter "Remote" in the menu Field bus is set to "on". The configuration-tool Elovision is active.
Field bus module unavailable		The controller is not fitted with the correct hardware for the selected protocol.
DfErr	Text display error	Please send the controller back to the manufacturer.
ERRO	System error	Please send the controller back to the manufacturer.
ERR8	System error	Quit error message. Check the parameters. If the error is still there, send the controller back to the manufacturer.

Version: 1.00

7 Technical Data

Input Pt100 / RTD - 30400°C	PT100-1 and PT100-2: 2- wire connection PT100-3 : 3- wire connection Built-in protection against sensor breakage and short circuit Sensor current: < 1 mA Calibration accura cy: < 0,2 % Linear error: < 0,2 % Influence of the ambient temperature: < 0,01 % / K		
Logic input	Internal resistance > 22k-Ohm Level 0 < 2V Level 1 > 9V; max 30V		
Logic outputs	Bist. voltage, 0/24 V	DC, max. 500 mA, short-circuit proof	
Relay output	Relay changeover co	ntact ; max. 250V AC, max. 3A, resistive load	
Continuous outputs	020 mA maximal lo Automatic switching,	bad 300 Ohm; 010V minimal Load 5kOhm. depending on connected load.	
Hybrid Output	Optional plug-in module tri-phase contacts, two phases are operated by controller. max. 440V AC; max. 13A; max. 9kW total power Please note: These outputs have to be protected by seper- ate 16 Ampere fuses of type FF (very fast acting).		
Fieldbus	Optional plug-in module: - Serial: RS232, RS485, TTY (20mA) - Profibus DP, according to EN 50170 All variants are equipped with optical insulation.		
Ethernet	Modbus TCP		
USB	Host for USB-Stick; r	nax. 100mA	
Supply voltage	24 V DC, +/-25 %
